- HTML & CSS
- Bootstrap
- React & JSX
- React-Native
- Javascript
- MongoDB
- Node.js
- Express
- Expo
- git/github
- Claude Code
- Claude API
- Anthropic Console

About

I'm an entry-level developer who completed an AI-native Full-Stack program through CodeBoxx Academy. Experienced with Javascript, React, JSX, HTML, CSS, Bootstrap, Java, Springboot and the MERN stack.I bring several years of experience diagnosing technical problems as an HVAC tech, communicating with customers, managing competing priorities, and performing effectively in fast-paced environments. Seeking an opportunity to apply software development, technical troubleshooting, communication, and problem-solving skills within an AI, IT, or software development team.

Projects

Portfolio Website - *https://prettyrad-wav.github.io/*
This is my portfolio website which is live via github pages and displays information about me including a brief summary, my skills, education, work history, projects and links as well as a contact form to send me messages.

CodeBloggs – *https://github.com/prettyrad-wav/Fullstack_Codebloggs*
A full-stack MERN social blogging platform for developers. Users register, log in, post short "bloggs," like and comment on posts, and browse a directory of other users. Built with MongoDB, Express, React, and Node.js.

Rocket Delivery – *https://github.com/prettyrad-wav/rdelivery-m14*
Rocket Food Delivery is a food-ordering mobile app with a React-Native + Expo front end and a Springboot backend with MySQL database. Two roles share one login: Customer and Courier. A user logs in and, if their account holds both roles, picks which one to use for that session. Customers can view restaurants and place orders while couriers can accept deliveries and advance order status.

Education

Codeboxx Academy - *ai native full Stack program*
June - September 2026

Tri-County RVTHS - *High school diploma, Plumbing & HVAC training*
2012 - 2016
